1 Install *R* from Source

I followed the instructions here there pretty straight forward.

The only thing to be aware of is that you will have to point `make` towards `java`, so, try something like:

```
make -I /usr/lib/jvm/java-1.11.0-openjdk-amd64
sudo checkinstall
```

to remove it use:

```
  dpkg -r r
```

```python
for i in range(10):
    print("test "+str(i))
```

```
test 0
test 1
test 2
test 3
test 4
test 5
test 6
test 7
test 8
test 9
```

```r
for( i in 1:10) {
print(i)
}
```

```
[1] 1
[1] 2
[1] 3
[1] 4
[1] 5
[1] 6
```

```
[1] 7
[1] 8
[1] 9
[1] 10
```
