Demonstration of Citations

Contents

You will need to install the `org-ref` package by following the instructions on their GitHub, you need to add a line to your `.emacs.d/.init.el` but then you should be able to do `M-x package-list-packages` and find `org-ref` in order to install it.

With my dotfiles I then use `, i c` to insert a citation with helm that looks through all of the references.bib (which is built by zotero using the better bibtex extension)

The export to LaTeX and export to html both produce references for me with the dotfiles and the latex style.

I'm using Lots of citations [**zotero-86**] like this one on differential equations [**Zil2009**] and this one [**Wic2019**] the *TidyVerse* Style guide and this one [**Che1996a**] on computer font.
