1 Working with Atom atom

1.1 Preliminaries

1.2 How to follow Links?

1.3 **TODO** RMD Files?

1.4 **TODO** Can I have a Preview Window Automatically?

1.5 How to auto Inline Math

1.6 R Snippets?

1.7 Fuzzy Ripgrep?

1.8 Autocomplete

1.9 Snippets

1.10 Org Preview

1.10.1 Theory

1.10.2 **TODO** Wrap this into a function/package in atom

This really shouldn't be too hard, just make a keybinding to call a bash
script and then have an after save hook.

1. **TODO** Use `on-save` an extension called on-save allows after save
   hooks, using this `.json` I was able to get something fairly reasonable:

   ```
   [
     {
       "srcDir": "./",
       "destDir": "/tmp",
       "orgfile": "README",
       "files": "**/*.org",
       "command": "pandoc -B ~/Templates/CSS/gitOrgWrapped.css --mathml -s --self-c
     }
   ]
   ```

1.10.3 **TODO** Implement this in emacs even
